

A Co-location Profile Norwegian Blue Carbon: Co-location Profile and Management Priority

B Carbon at Stake by Management Class

Panel A: Co-location profile. Cells are min-max normalized within each indicator column; raw values are annotated. Protection (green): % habitat in strict MPA; % under any designation. Pressure (red): dredging and aquaculture facilities per km² of habitat. Carbon (blue): mean stock density (g C m⁻²) and total stock (Gg C). Panel B: Total carbon stock in each management class. Pressure threshold = within-dataset median (relative comparison); MPA adequacy threshold = 10% (policy benchmark). Oslofjord seagrass sites are included in the Skagerrak aggregate.
