

Norwegian Blue Carbon Profile: Regional Stocks and Management Priority

Panel A: Total carbon stock (Gg C) by region; kelp uses national mean density (Gundersen 2021), seagrass uses regional mean density (Gagnon 2024). Hatching = kelp (equal-density assumption). Panel B: Carbon in each management class. Pressure threshold = within-dataset median; MPA adequacy = 10% (policy benchmark). Values in Gg C.
